

EPURE
ZÖNE

transform the way
you see the kitchen sink

the latest advance in the transformation of the domestic space

Our designers have created an innovative and leading edge solution that takes the sink into the future and challenges our preconceptions of what a kitchen sink can be.

Epure Zone opens up your entire bench space

The centre of the kitchen has always been the sink and Epure Zone adds new levels of functionality. The sink remains operational even with the stainless steel covers in place. The drainer, which also converts into a dish drainer rack,* allows water from the tap to drain through to the bowls below. Remove the covers and the multi-level sliding feature allows the drainer, colander and chopping board to slide along the width of the sink, to be positioned wherever you decide.

(*Available 1.5 bowl only)

a functional masterpiece

designed around
the needs of the user

Beautiful, functional

It began with an insight into the role of the sink in the contemporary home. With our increasing reliance on dishwashers, the sink is no longer just the place to wash dishes. The sink in the modern kitchen has become the focal point for food preparation. It's in this role that the true impact and benefits of Epure Zone can be fully appreciated.

Deep, functional bowls

Reflecting the latest in design trends, the rectangular shaped bowls of Epure Zone are deep and generous, offering single and one and a half size options and a distinctive square basket waste. The 10mm internal corner radii ensure the bowls are easy to clean. Constructed from 100% recyclable, 1.2mm thick 304 stainless steel, it's hygienic, stain and odour resistant, offering commercial grade levels of performance.

Potentially the most
innovative feature

The Stainless Steel Covers

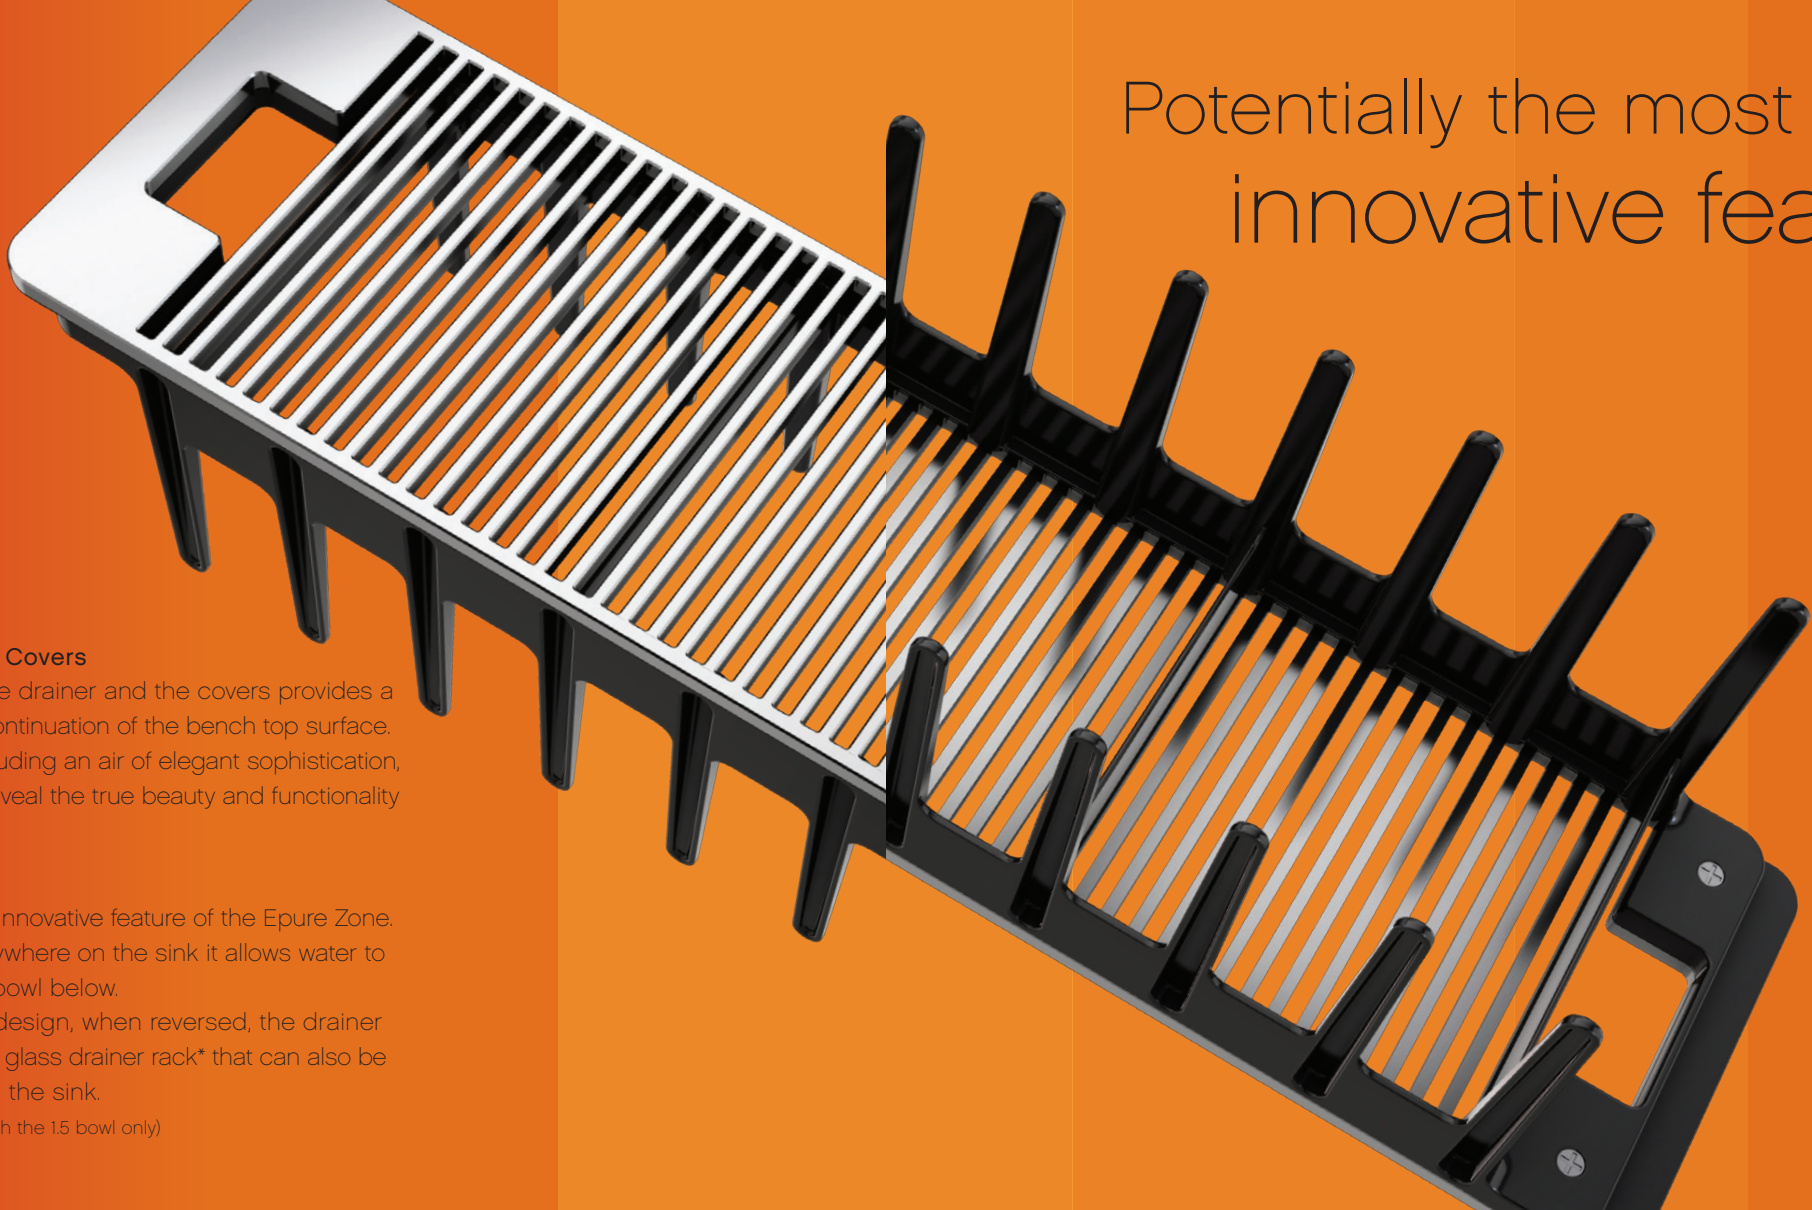

The integration of the drainer and the covers provides a harmonious visual continuation of the bench top surface. Sleek, buffed and exuding an air of elegant sophistication, the covers slide to reveal the true beauty and functionality of Epure Zone.

The Drainer

The Drainer is a key innovative feature of the Epure Zone. When positioned anywhere on the sink it allows water to flow through to the bowl below.

Through ingenious design, when reversed, the drainer becomes a dish and glass drainer rack* that can also be placed anywhere on the sink.

(*Drainer rack available with the 1.5 bowl only)

The Chopping Board

Concealed by the stainless steel covers, the substantial timber chopping board fits on top of the bowls and slides horizontally to the desired position. Glide rails allow it to slide over the colander, and across the entire width of the sink, adding greater versatility and functionality to this integral work surface.

The Caddy

There are times when the accessories may need to be stowed and our designers have developed a unique solution; a caddy that helps to organise all accessories in one simple storage and carrying device.

No more
reaching into
cupboards
for kitchen
essentials

The Colander

An essential in food preparation for washing, rinsing and storing. A contemporary rectangular shape, the large colander, with its protective plastic surround, can also slide horizontally below the chopping board and sits easily both in or out of the bowl for ease of use. Constructed from heavy duty brushed stainless steel and food grade plastic, it resists rust and scratching.

the ultimate complement to the innovative sink design

Dorf Epic Sink Mixer

This tap is a statement in itself. The extended spout swivels 180° and provides more than standard reach over the bowls, while the concealed flush fitting aerator ensures the clean lines and smooth edge design remains uninterrupted. Adjustments can be made to the cartridge to reduce the water temperature and save energy without compromising performance, while the internal cartridge eliminates drips. WELS 4 star rated, 7.5L/min. Tap sold separately.

What goes into your sink
says a lot about you.
