

Rinnai

Gas Log Flame Fires

Experience Our Innovation

The Rinnai logo is displayed in white text on a red rectangular background.

Experience Our Innovation

For 40 years Australians have been enjoying the comfort, convenience and reliability of Rinnai gas appliances. Our innovative products are designed with the environment in mind, with low emission technology and high efficiencies, as well as a host of other great features.

Rinnai is committed to ongoing innovation - delivering efficient, well designed and engineered lifestyle solutions offering a host of benefits including ambience, versatility, control and reliability. Backed with extensive warranties and after sales service teams, Rinnai is proud to be the No.1 choice for gas space heating in Australia.

Through innovation, we will endeavour to continue offering superior ranges of home appliances that provide a clear insight into what the future holds for Australian homes.

Why choose Rinnai

There are many types of heating systems available for Australian homes. Rinnai heating systems bring you the latest advanced technologies that provide you with choices that can meet individual needs. Whether relating to safety, convenience, available space, environmental needs or ongoing running costs, Rinnai will have a system that suits.

SELECTION GUIDE

16 Important Tips

17 Sizing and Installation

18 Specifying Guide

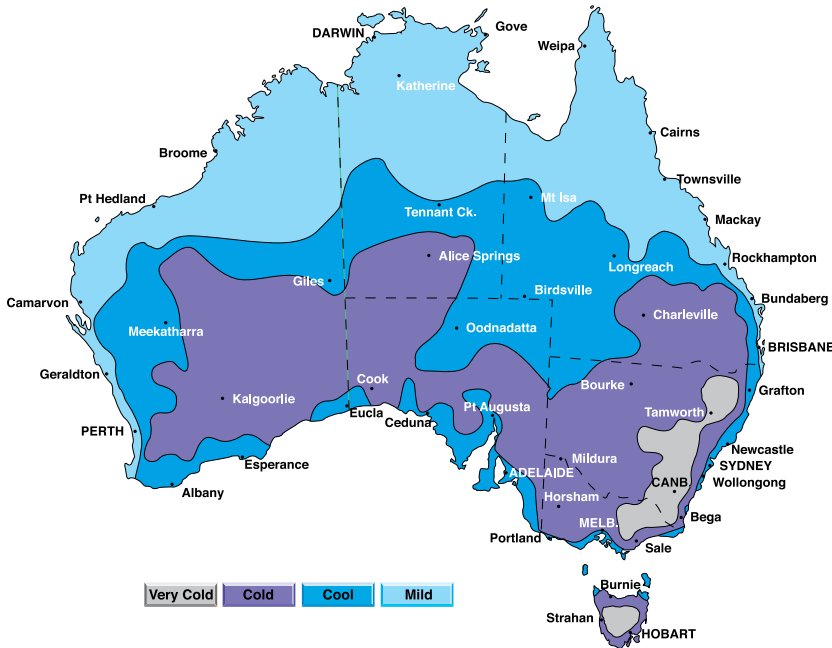

19 Specifications

23 Other Rinnai Products

step 1 climate

Pictured on the left is a climate map of Australia that shows four winter climate zones relevant to Rinnai Heaters; Mild, Cool, Cold and Very Cold. It is important that you choose the correct zone that suits an application, as it directly relates to the performance of the heater.

step 2 heating area

It is also important that you consider the size of the heating area. This includes adjacent rooms through permanently open doorways and hallways. On page 22 you will find the approximate maximum area that the unit will heat based on the climate zones (ie. Step 1).

Calculate your selected Rinnai Heater's Capacity			
1. Selected Heater		4. 'Heats up to' Capacity (see specifications)	m ²
2. Climate/Zone		5. Less Heat Loss (see specifications)	%
3. Total area you are going to heat (length x width)	m ²	6. Adjusted Capacity	m ²

↑ Your area should be less than the Adjusted Capacity ↑

step 3 heat loss

Not all homes will have all of the features listed in the table to the right. Consequently, this will affect the heating capacity. Place a ✓ alongside each of the design features if they are relevant to your home. Everywhere there is a ✓, an adjustment to the 'Heats up to' capacity will need to be made.

Please note that this is only a guide and individual house designs and locations may vary.

Contact the Rinnai Helpline if you require further assistance 1300 555 545.

✓	Heat Loss Factors		Deduct	Example
<input type="checkbox"/>	No Ceiling Insulation	-10%	_____ %	
<input type="checkbox"/>	House built on stumps (not a slab)	-5%	_____ %	-5%
<input type="checkbox"/>	No carpets on floors	-5%	_____ %	-5%
<input type="checkbox"/>	No drapes on windows	-5%	_____ %	
<input type="checkbox"/>	Uncurtained window area exceeding 15.0m ²	-10%	_____ %	
<input type="checkbox"/>	Ceiling height exceeding 2.4m			
<input type="checkbox"/>	If Yes, height 2.5 - 2.8m	<input type="checkbox"/> -3%	_____ %	
	2.8 - 3.0m	<input type="checkbox"/> -5%	_____ %	
	3.0m +	<input type="checkbox"/> -7%	_____ %	
	Reversible Ceiling Fan (positive)	+5%	_____ %	_____
<input type="checkbox"/>	HEAT LOSS FACTOR	TOTAL	_____ %	-10%

As an example, you wish to purchase a Slimfire gas log flame fire, live in the 'Cool' zone, and have an area to heat of 65m². The recommended 'Heats up to' capacity for this model is 68m², however you also have no carpets on the floor and a house built on stumps. The heat loss total percentage is -10% (-5% + -5% = -10%) which is deducted from the 68m² (the capacity of your heater) as a % to reduce it to 61m². This will no longer heat your desired 65m². The next model up is the Royale Inbuilt with a 'Heats up to' capacity of 93m², less the 10% heat loss = 84m², which will adequately heat the area.

Rinnai

Classic Range - NEW Slimfire 252 Flame Fire

Slimfire 252 in Stainless Steel on Black

Introducing the NEW **Slimfire 252** Flame Fire

- **Designed to fit easily** into most existing fireplaces, easy replacement for old style space heaters
- Ideal for **small to medium** sized lounge/family rooms
- **Slim-line design with NEW modern flat glass fascia**, realistic flame picture and log appearance
- **3 manual heat settings and 2 speed automatic fan** for even heat distribution
- Easy one-touch **electronic ignition**
- **No flue required** for sound masonry fireplaces, reducing installation costs
- Available in **inbuilt or console***
- **Zero Clearance Kit** available for installation in (mock) fireplaces
- **Available in 3 colours** - stainless steel on black, black and stainless steel
- Available in both Natural Gas and LPG

*Console Kit

Designed for convenience, the Slimfire console is ideal for situations where a false fireplace is not desired or where there is no masonry fireplace, providing flexibility and reduced installation costs. Purchased in addition to the Slimfire, the kit simply assembles around the fire allowing it to be installed against a wall utilising an "in wall" flue system.

Rinnai

The Rinnai **Royale** Gas Log Flame Fire features the classic design of a wood fire

- **The look & feel of a traditional wood fire** without all the hassle and the mess
- **Full Electronic Thermostatic Control**, select a desired temperature which is then maintained by the heater (select auto-off function)
- **Dual Digital Timers** allows for on and off programming for both mornings and evenings
- **Pre-heat Mode** ensures your room is pre-heated by the time programmed
- **Flame Function** overrides the thermostat and maintains a constant flame picture when only the ambience of the flames is desired
- **Powerful 2 speed fan** allowing for even heat distribution
- **Electronic Ignition** for seamless one touch operation
- **Child Lock** prevents unwanted access
- **Remote Control** with on/off and temperature control
- Suitable for large **open plan living areas**
- Available in both Natural Gas and LPG

Rinnai

Rinnai's **Sapphire** Flame Fire, now with new fascia options

- Ideal for new homes, renovations or simply replacing an old wood fire
- Clean burning technology enhancing energy efficiency - **4.1 Stars**
- **Powerful 6.97kW heat output** suitable for heating large open plan areas
- **Instant heat source** with the ambience and glow of flickering flames
- Realistic Australian **Eucalyptus Log Set**
- **Optional Remote Control** featuring programmable timer, flame override and fully thermostatic operation for added comfort
- **Stylish Glass Fascia** for added protection
- Available in both Natural Gas and LPG

4 models allowing flexible installation options including:

Existing Masonry Fireplaces - fits into almost all existing masonry fireplaces, no flueing is usually necessary if fireplace is in a sound condition.

False Fireplace Installation (*Zero Clearance*) – enables the construction of a false or mock fireplace. Zero Clearance box ordered separately.

Freestanding Plinth Option – A traditional gas log flame fire design with the unit resting on an elevated plinth. Plinth Kit ordered separately.

Freestanding (*Floor Mounted*) Option – This freestanding design has a more contemporary feel with the unit simply resting on the same size base. Console Kit ordered separately.

Rinnai

Contemporary Range - Symmetry Flame Fire

Symmetry in Black

The **Symmetry** Gas Log Flame Fire designed to be the focal point of your living environment

- Wide panoramic landscape orientation
- Flush against the wall stylish modern design
- **Fully thermostatic operation** for convenience and comfort
- **Multiple timers** - 4 periods per day can be programmed at varying temperatures. Ideal for mornings, daytime, evening and overnight
- Gentle flickering flame offering a warm realistic **ambience**
- Design registered Australian **Eucalyptus Log Set**
- Fine mesh **Dress Guard** for added protection
- Powerful multi-speed fan to assist with even heat distribution
- **Direct Vent Flue system**, Vertical or horizontal flue termination available allowing flexible installation options
- High energy efficiency - **4.2 Stars**
- **Room sealed appliance** for superior indoor air quality - combustion air drawn directly from outside
- **Full function 'RF' Remote** (no need to point directly at the unit) with an easy to read LCD screen
- **Inbuilt Zero Clearance** no need to purchase separate zero clearance box for mock fireplace installation
- Available in both Natural Gas and LPG

Change the look of your 752 down the track by purchasing a new fascia or media.

Rinnai

The centre piece for any outdoor entertaining area the Rinnai **Luminaire** Outdoor Gas Flame Fire

- Flexible design options that enables installation virtually anywhere outdoors
- Has a large natural flickering flame through a layer of white quartz stones
- Simple ignition with variable flame effect control
- Constructed from quality durable materials
- Inbuilt models can be finished (clad) to suit any outdoor setting
- LPG unit can run on 9kg gas bottle with a simple connection the same as standard BBQs
- Can be converted to Natural Gas and permanently plumbed for convenience
- Suitable for both domestic and commercial hospitality installations
- No need for 240 power supply

The range at a glance

Freestanding Outdoor Fire

- Most versatile installation option
- Minimum installation requirements
- Stylish stainless steel cover to protect burner when unit not in use

Single Sided Outdoor Fire

- Most popular design option
- Durable stainless steel cabinet with optional glass door for front

Open-See Through Outdoor Fire

- Flames are viewed from both sides, creating the feeling of space
- Durable stainless steel cabinet with optional glass door for front & back

Specification Luminaire Outdoor Flame Fire		Freestanding	Single Sided Cabinet	Open See through Cabinet	Freestanding in an enclosed Cabinet
Gas Input	LPG (Low-High)	25-45

Important Tips for heater selection

Energy Star Ratings

Energy Star ratings are an industry wide independent rating that gives an indication of how efficiently a heater operates. The more stars the greater the efficiency. Typically Portable gas heaters have around 5.9 Stars with the majority of flued heaters around 4.0 to 4.5 Stars. Some older type heaters are not as efficient, however they still perform extremely well with large heat outputs.

The Environment

In Australian homes, heating & cooling amounts to around 23% of household energy use – second only to hot water. Gas is one of the most greenhouse friendly fuel sources available and selection of a Rinnai gas heater can assist with our global need to reduce carbon emissions. In addition, the better insulated your home, the less work the heater needs to do, the less gas you will use and the less impact on the environment.

Source: Department of Environmental & Climate Change NSW

Running Costs

Rinnai gas heaters are designed to be highly efficient, and when used correctly, are a very economical form of home heating. The running cost of gas heaters compare very well to other forms of heating. Straight electric heating is by far the most expensive, with both gas heaters and electric reverse cycle heaters comparatively less expensive.

When comparing differing forms of heating in relation to running costs, it is important that the comparison is based on the same kW output of heat. Once we are comparing 'apples with apples', the calculation of the running cost is then based on the energy used (kW input) to achieve that output. The actual tariffs that are charged are listed on energy bills.

Selecting the right heater

It is very important that careful consideration is given to selecting the correct model/size of any heater. Critical factors such as the area to be heated, along with specific design and insulation characteristics of a home must all be considered. On the next page there is a heater selector relating to correct sizing or you can use our on-line version at www.rinnai.com.au. In general, heater sizing should be based on the kW output of the heater. As a very rough guide to heating performance (based on our heating zones):

Very Cold Zone:	1 kW output will heat approx 8.5m ²
Cold Zone:	1 kW output will heat approx 10m ²
Cool Zone:	1 kW output will heat approx 13m ²
Mild Zone:	1 kW output will heat approx 16m ²
i.e. a 7.3 kW output heater in a Cool Zone will heat approx 95m²	

HANDY HINT

The MJ input of heaters should not be used for comparison. The kW output is the only true 'apples for apples' method.

As an example, a 25MJ input, 5.9 Star heater has a larger heat output than a 25MJ 3.1 Star heater.

Sizing and Installation

Correct Sizing

Correctly sizing your heater is vital for optimum performance and ultimately your comfort. To assist you with the right selection, we have divided Australia into four winter climate zones; mild, cool, cold and very cold. These zones relate directly to the 'Heats up to' capacities in the specification tables. They are to be used as a guideline only and assume a well insulated home with carpets, wall and ceiling insulation and curtains on windows.

A detailed version of the Heater Selector is available on-line at www.rinnai.com.au. Postcode driven, it simply assists in calculating your heat loss factors. It takes into account features such as high ceilings, polished floorboards and large uncovered windows and then selects the appropriate Rinnai appliances.

The screenshot shows the 'Heater Selector' web interface. It is divided into three main sections: 'Room Size', 'Heat Loss Details', and 'Appliance Gas Type'.
 - **Room Size:** Includes a text input for 'Heating Area in m²' (with a note 'Up to a maximum of 200m²'), a dropdown for 'Choose ceiling height', and explanatory text: 'Most ceilings are between 2.5 and 2.8 meters. The higher the ceiling, the larger the volume of air that needs to be heated.'
 - **Heat Loss Details:** A list of checkboxes: 'No ceiling insulation', 'No wall insulation', 'No carpets on floors', 'No drapes on windows', 'House built on stumps', and 'Window area over 15 m²'. Explanatory text states: 'Insulation helps retain heat, carpets and drapes also act as good insulators. A house built on stumps will lose more heat.'
 - **Appliance Gas Type:** A dropdown menu currently set to 'Natural Gas' with the instruction: 'Choose the gas type you require for the heater.'
 At the bottom, there is a red button labeled 'FIND PRODUCTS >'.

Installation Flexibility

Rinnai understands that not all households have existing masonry fireplaces which is not an issue with a Zero Clearance Box. This allows installation against combustible materials such as wall studs - the 752 and Symmetry fires are already zero clearance by design. For the Royale, Slimfire and Sapphire ranges, a separate Zero Clearance Box and Flue System needs to be purchased and installed as shown below.

4 Easy Steps to Specifying your Flame Fire

1

Select Flame Fire

Use our easy heater selector guide to choose the correct sized flame fire to suit your heating needs.

Choose from any of the six Rinnai Flame Fires styles.

- classic (Slimfire, Royale)
- contemporary (Symmetry, Sapphire, 752)
- or outdoor (Luminaire)

2

Select Installation Type

Depending on whether its an existing or mock fireplace, the location of your fireplace and gas connection, the type of install will vary accordingly. Use our easy guide to find the best install solution to suit your needs. Make sure you also consult an installer.

3

Order Components (as required)

Depending on the installation type, you will need to order relevant flueing components accordingly. Use our guide for easy reference.

4

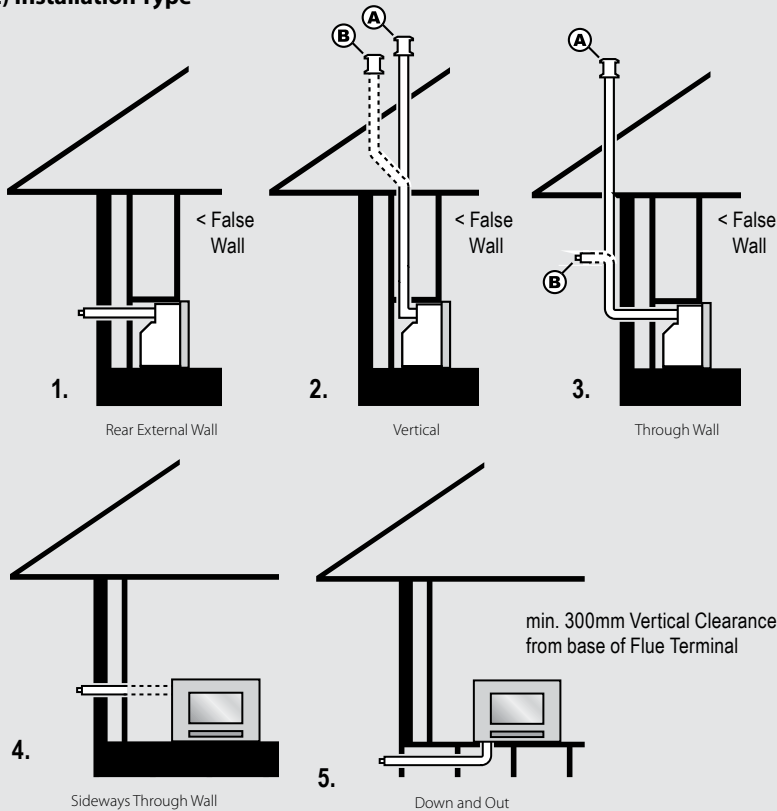

Select Fascias / Media / Accessories (as required)

Last but not least, remember to select your preferred fascias, media or accessories (as required) to suit your environment & complete the look of your flame fire.

	All Other Parts	1 year								
	Free Labour	1 year								

Please note:

- (1) Suitable for direct, vertical or horizontal flueing. 500mm required for down and out flue applications. See installation instructions for full details.
- (2) 31.5 MJ/h when installed with a direct flue. Gas input 28MJ/h when installed with an extended flue.
- (3) 4.1 Stars when installed with a direct flue. Increases to 5.3 Stars when installed with an extended flue.
- (4) Full replacement costs in the first year, reducing 10% per year thereafter.
- (5) Option of white quartz or black pebbles media.

240V power is required with all models and a power cord & plug is fitted. In most cases this cord is standard on the right hand side of the appliance. The Royale & Slimfire Flame Fires also allow you to have the electrical cord on either the right or left hand side.

To hide the power cord, it is permissible to have the unit 'hardwired' behind wall cavities as long as it is in accordance with the Standard AS/NZS3000 and done by a qualified electrical tradesperson such as an electrician. In short, this means that it must be wired with an accessible double pole isolation switch.

Dimensions are subject to production tolerances and may vary slightly from those given.

Rinnai Australia Pty. Ltd. Reserves the right to make modifications and change specifications without notice. We will however endeavour to communicate any major changes well before implementation.

*Selected stores only, Call 1300 555 545 for availability in stores.

⁽⁶⁾Refers to the visual appearance of the appliance external to the wall for inbuilt models.

Additional Rinnai Gas Appliances

In addition to the heating products in this brochure, Rinnai have many other great appliances to compliment both indoor and outdoor lifestyle solutions.

Gas Boosted Solar Hot Water

Gas Boosted Systems are powered with the same technology as the Rinnai INFINITY. This means you can enjoy the benefits of Continuous Flow hot water, pre-heated with energy from the sun. For further information on applicable rebates, please refer to our on-line estimator at rinnai.com.au

Gas Continuous Flow Hot Water

Australia's No.1, the Rinnai INFINITY offers the convenience of temperature controlled hot water that never runs out. Compact and highly efficient, these units all boast a 5+ Star energy rating.

Portable Gas Space Heating

The Rinnai range of Portable Heaters are a highly efficient and flexible home heating alternative. They require no installation and can be stored away when not used. There are 3 forms of heating available - Radiant heat, Convection heat gently circulated with a fan and a combination of both Radiant and Convection heat.

Flued Gas Space Heating

The Rinnai range of Flued Heaters are permanently installed in a home utilising fixed fluing to ensure there are no indoor emissions. They offer powerful heat in a wide range of designs and styles. They are perfect for homes undergoing renovations and in particular extensions where an additional efficient heating source is required.

Need help with an installation?

In most situations Rinnai retailers can assist with the installation of our appliances. Should this not be the case, Rinnai has an installation service available direct to the end-user. Any installation of a Rinnai appliance is a specialist process and requires trained professional installers to ensure safe and efficient operation of the appliance. This is particularly relevant for connection to gas, electrical changeovers and the installation of Solar Collectors. Our Rinnai installers are not only very familiar with our products, but are fully insured and OH&S compliant. Be confident in your installation by employing Rinnai Service.
